

# ABSTRACT OF THE DISCLOSURE

Improved organophotoreceptor comprises an electrically conductive substrate and a photoconductive element on the electrically conductive substrate, the photoconductive element comprising:

- 5 (a) a charge transport material having the formula

where n is an integer between 3 and 6;

- 10 R<sub>1</sub> and R<sub>2</sub> are, each independently, H, an alkyl group, an alkenyl group, an aromatic group, or a heterocyclic group;

R<sub>3</sub>, R<sub>4</sub>, and R<sub>5</sub> are, each independently, H, thiol, hydroxyl, carboxyl, an amino group, a halogen, nitro, cyano, an alkyl group, an alkenyl group, an aromatic group, a heterocyclic group, or a part of a ring group;

X<sub>1</sub> and X<sub>2</sub> are, each independently, a linking group;

- 15 Y comprises an arylamine group; and

Z is a bridging group; and

- (b) a charge generating compound.

- 20 Corresponding electrophotographic apparatuses and imaging methods are described.
